Cyber Scam Awareness Checker

A Website for Identifying Suspicious Links and Promoting Cyber Safety

Presented by: [Your Name]

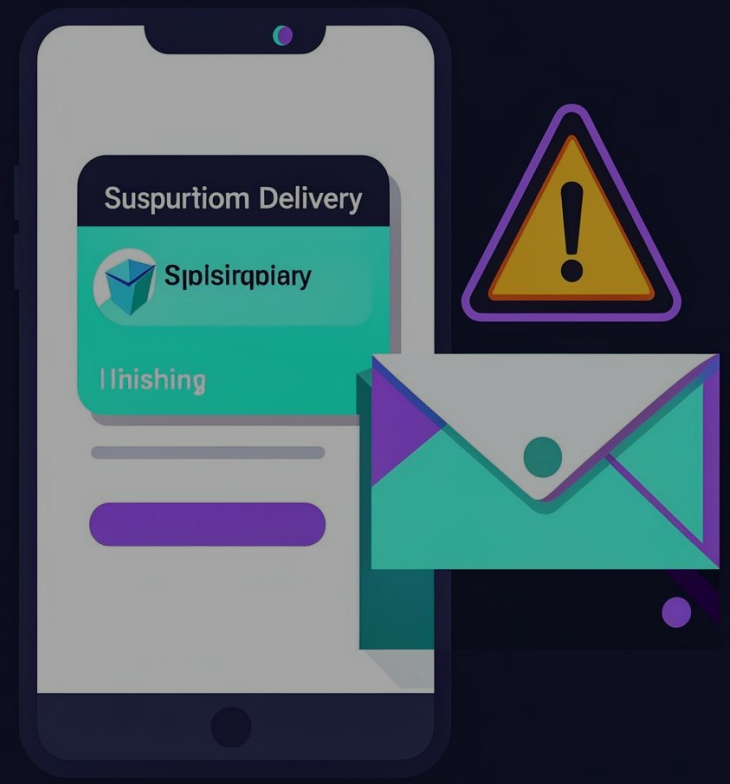

Department: Electronics and Communication Engineering

College: [Your College Name]

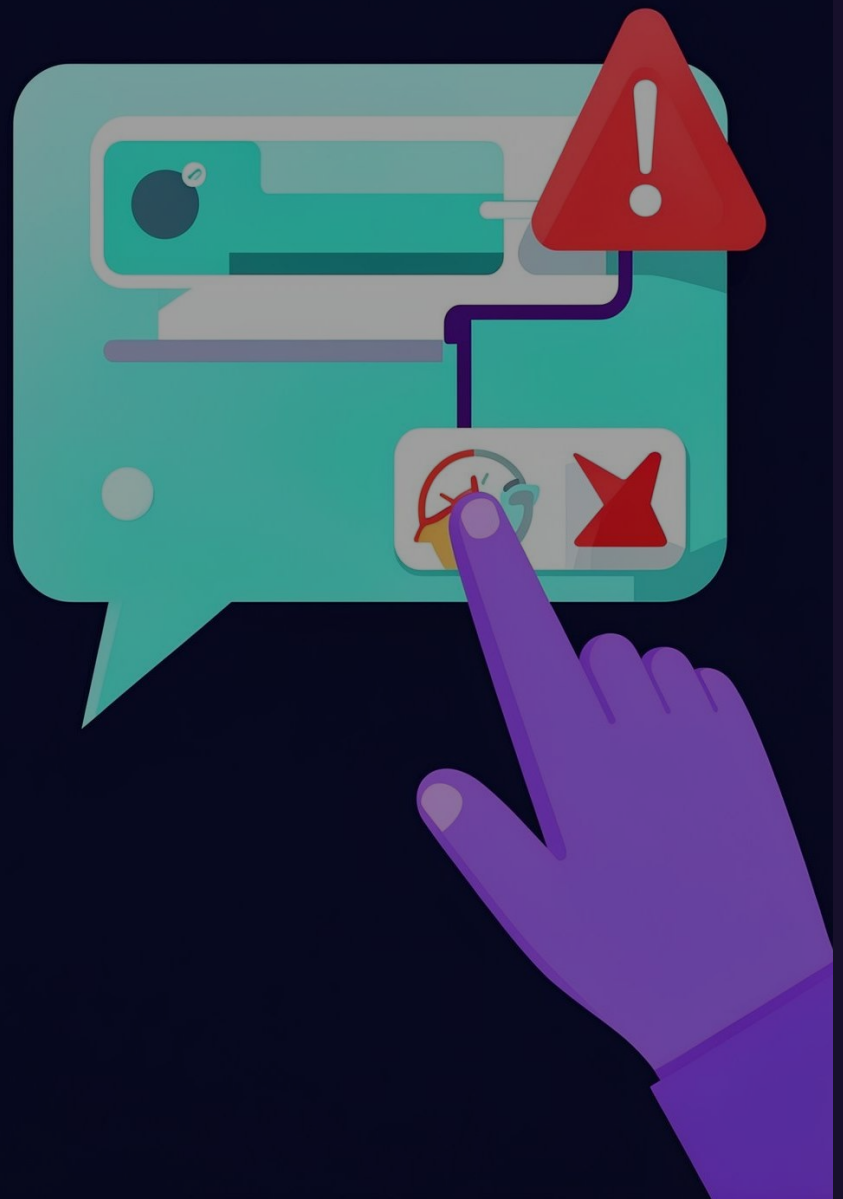

Made with GAMMA

Introduction

- Cyber scams are increasing through messages, emails, and websites.
- Common examples include fake delivery notifications, fraudulent internship offers, and phishing links.
- Users may unknowingly reveal passwords, OTPs, or banking information.
- Our project aims to improve cyber-safety awareness through a simple website.

Made with GAMMA

Problem Statement

- Students frequently receive suspicious messages and links.
- Many users cannot easily recognize phishing attempts.
- Fake offers and urgent messages can trick users into sharing sensitive information.
- A simple platform is needed to explain suspicious indicators and recommend safe verification steps.

Made with GAMMA

Objectives

Identify common warning signs in URLs and scam messages.

Explain why a link or message may be suspicious.

Educate users about phishing and online fraud.

Encourage safe browsing and responsible online behavior.

Made with GAMMA

Proposed Solution

- Develop a website called Cyber Scam Awareness Checker.
- Allow users to enter a URL for basic pattern-based checks.
- Display suspicious indicators with simple explanations.
- Provide safety tips and a checklist for verifying messages.
- Clearly explain that the website cannot guarantee whether a link is safe.

Made with GAMMA

Key Features

Suspicious URL checker.

Scam warning explanations.

Examples of fake delivery and internship messages.

Cyber-safety checklist.

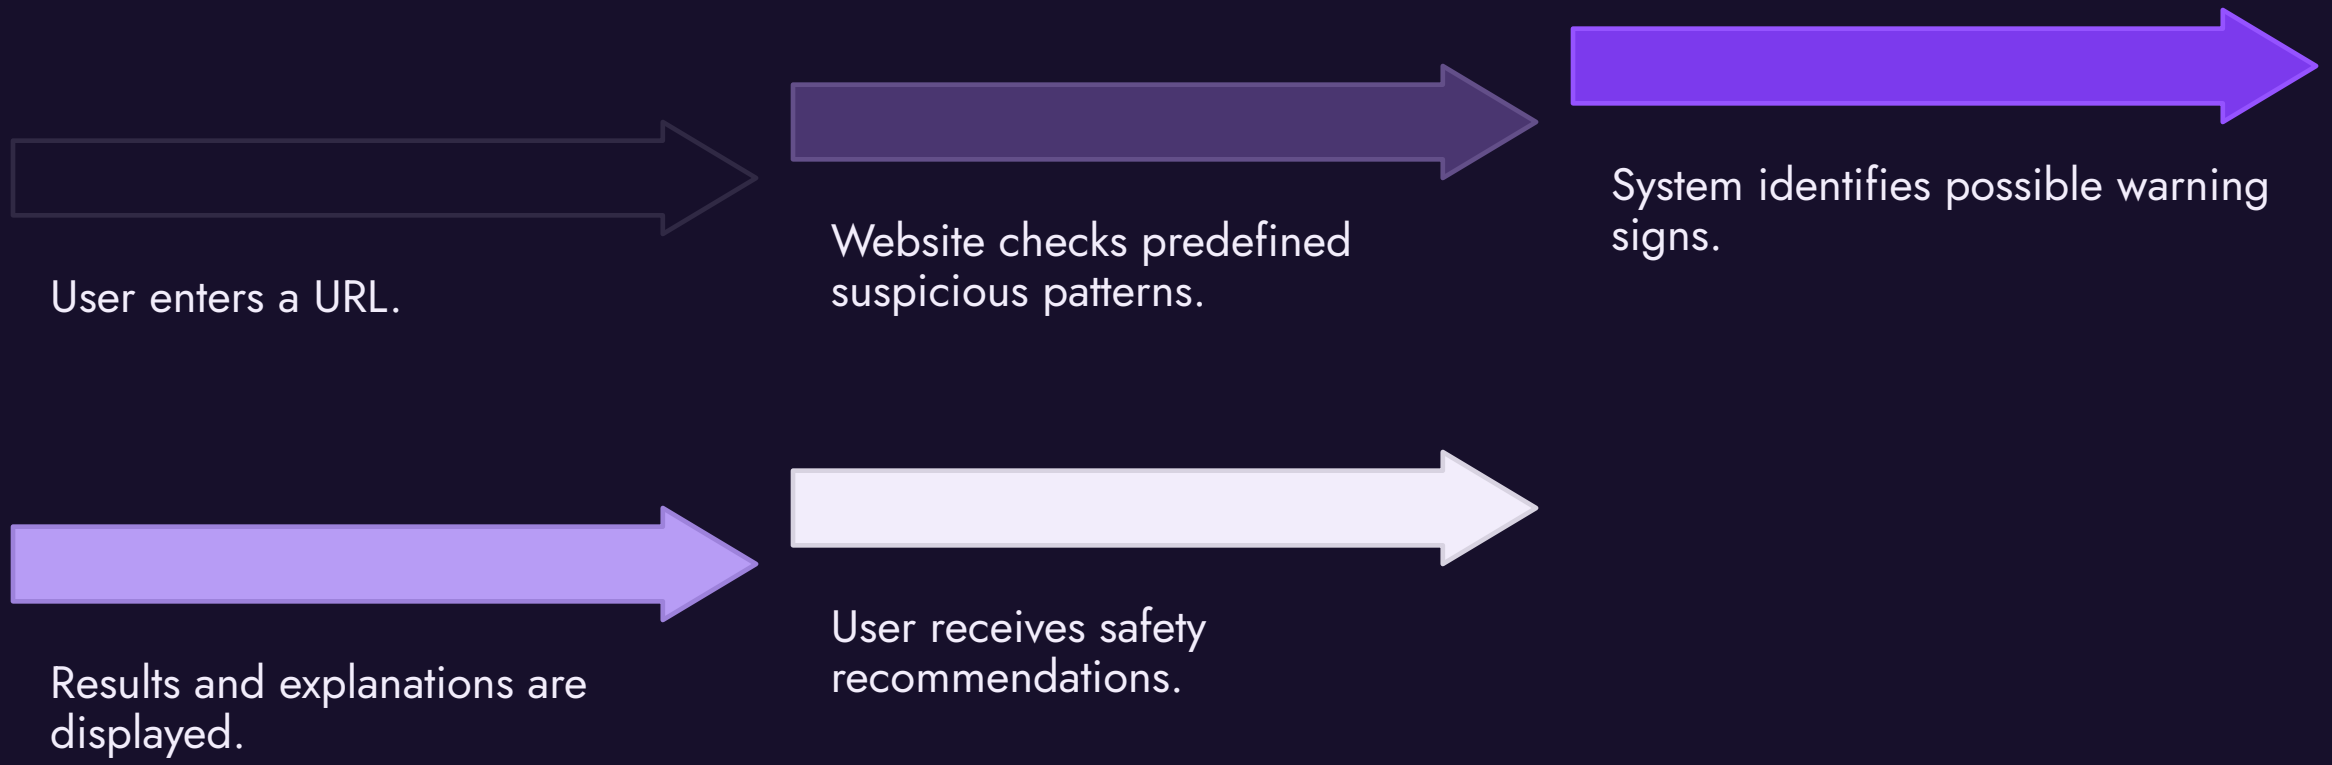

Interactive awareness quiz.

Mobile-friendly interface.

Made with GAMMA

Working Process

Show a clear flowchart from input to safety guidance.

Made with GAMMA

Technology Stack

Platform: Base44 AI website builder.

Frontend: Base44-generated website interface.

Checking logic: Basic rule-based URL pattern analysis.

Data storage: Optional, depending on project requirements.

Future enhancement: Trusted URL reputation API, if available and affordable.

Made with GAMMA

Benefits, Limitations, and Future Scope

Benefits:

- Improves cyber awareness.
- Helps users recognize common scam indicators.
- Provides quick and beginner-friendly safety guidance.

Limitations:

- Basic rules may miss sophisticated scams or flag legitimate links.
- A link without warnings is not necessarily safe.

Future scope:

- Telugu-language support.
- Integration with a trusted URL reputation service.
- More interactive cybersecurity training.

Made with GAMMA

Conclusion and References

- The project promotes safer internet usage through education and basic URL checks.
- It helps users understand common phishing warning signs.
- It supports awareness but does not replace official verification or professional security tools.
